

WHO IS ON THIS PLATFORM

Waste Suppliers

Farms, factories, and businesses with agri-waste, scrap, or biomass. Drop off at partner junk shops — no direct logistics needed.

Artisans & Creatives

Makers who turn raw waste into home products. Source materials, list items for sale/rent/lease, fulfill demand-driven orders.

Buyers / Homeowners

People redesigning spaces. See their actual room redesigned with real local products — then buy, rent, or lease directly.

PLATFORM CORE

What the platform does for everyone

Material Matching

Links artisans to sorted materials at nearby partner junk shop hubs.

AI Room Design

Buyer photos their room — AI redesigns it with real listed products placed in it.

Buy / Rent / Lease

Each item shows all options. Buyers choose ownership or flexible access.

Return & Refurbish

Rental returns trigger refurbishment so items re-enter the market.

Item listing types:

For Sale

For Rent

For Lease

Sale + Rent

Artisans choose per item. Rental/lease periods: per event · weekly · monthly · long-term.

HOW EACH ACTOR USES THE PLATFORM — STEP BY STEP

Waste Supplier Flow

01. Register & verify

DTI/SEC registration, business type and location.

02. List available waste

Material type, volume, frequency, and price.

03. Drop off at junk shop hub

Nearest partner junk shop collects & sorts on your behalf.

04. Artisans source from hub

No direct logistics — junk shop manages delivery to artisans.

05. Get impact report

kg diverted from landfill, artisans served, cycles completed.

Artisan Flow

01. Register & set up shop

Profile, craft type, location, CE material tags.

02. Source from junk shop hub

Browse sorted materials at nearby certified hubs.

03. List items or take orders

For Sale/Rent/Lease, or fulfill demand-driven requests.

04. Set rental terms

Price per period, deposit amount, duration options.

05. Fulfill & manage returns

Ship orders, receive returns, refurbish, and relist.

Buyer Flow

01. Download & sign up

Name, location, and style preferences.

02. Photograph the room

AI reads dimensions, lighting, and existing style.

03. See your room transformed

AI places real local products into your actual room photo.

04. Choose: buy, rent, lease

Or request a product that doesn't exist yet.

05. Return or keep

At rental end: return, extend, or buy outright.

REVENUE MODEL — HOW THE PLATFORM EARNS

Stream 1 — Primary

Sale Commission

10–12% on every completed purchase.

Launch — Year 1

Stream 2 — Primary

Rental Commission

10–12% on every rental or lease.

Launch — Year 1

Stream 3 — Secondary

Artisan Subscription

PHP 299–499/month for premium tools & AI priority.

Introduce — Year 2

Stream 4 — Tertiary

Supplier Listing Fee

Boost fee for suppliers to reach more artisans.

Introduce — Year 2

THE CIRCULAR ECONOMY LOOP THIS CREATES

Waste

Agri-waste & scrap dropped at junk shop hub

Sorted

Junk shop sorts by material type for artisans

Made

Artisan crafts product from sourced material

Designed

AI places item in buyer's actual room

Sold/Rented

Buyer buys, rents, or leases the item

Returned

Returned, refurbished & relisted for next cycle

Every rental cycle keeps the item in use longer — fewer raw materials needed, more revenue per product, deeper CE impact.

INNOVATION 1 — JUNK SHOP PARTNERSHIP NETWORK

The Logistics Problem — Solved by Activating Existing Informal CE Infrastructure

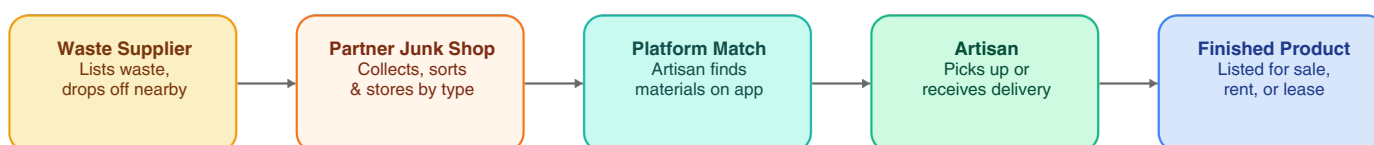

The Problem

- ✗ Waste suppliers expect payment once waste has "value" on a platform
- ✗ Artisans only want specific sorted materials — not mixed waste
- ✗ Nobody wants to pay for logistics of unprocessed waste
- ✗ Platform shouldering logistics = high cost, no value generated yet

The Solution

- ✓ Junk shops already have established pricing — no inflated expectations
- ✓ Junk shops already sort by material type as part of their business
- ✓ Junk shops already have pickup routes — tricycles, kuligligs, suki networks
- ✓ Platform never touches waste — junk shop is the logistics and sorting layer

HOW THE JUNK SHOP HUB NETWORK FLOWS

INNOVATION 2 — CLOSING THE IMAGINATION GAP FOR ARTISANS

Why Great Artisan Products Don't Sell — and How AI Fixes It

Without the platform

- ✗ Buyer sees rattan lamp on white background
- ✗ Thinks: "Nice, but will it fit my sala?"
- ✗ Hesitates. Doesn't buy. Artisan loses sale.
- ✗ Beautiful, unique products remain invisible.

With AI room design

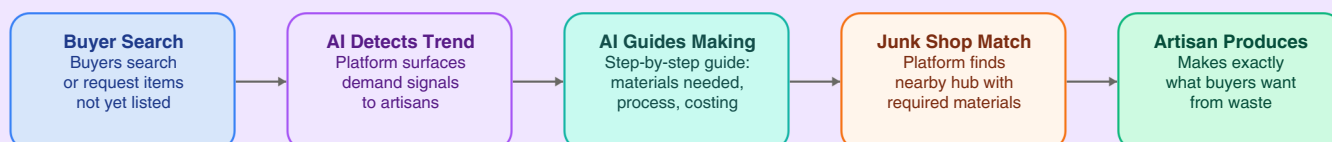

- ✓ Buyer photographs their actual sala
- ✓ AI places the exact lamp where the corner is empty
- ✓ Buyer sees it in their own room. Decision is obvious.
- ✓ The AI is the artisan's best — and cheapest — salesperson.

INNOVATION 3 — DEMAND-DRIVEN PRODUCTION LOOP

Buyers Drive Production — AI Bridges the Knowledge & Material Gap

Traditional flow: Artisan makes something → hopes buyers want it.

New flow: Buyers search for something → platform detects demand → AI guides artisan → junk shop provides materials.

Example: 30 buyers searched "plastic brick wall panel" → AI guides artisan → platform finds recycled plastic at nearest junk shop hub

COMBINED PLATFORM IMPACT — WHAT ALL THREE INNOVATIONS CREATE TOGETHER

Zero Platform Logistics

Junk shop network handles all waste collection and sorting. Platform pays nothing to move materials.

Higher Artisan Revenue

AI placement drives discovery. Demand signals eliminate guesswork. Rental creates recurring income.

Traceable CE Impact

Every product carries its full story: waste source → junk shop → artisan → buyer → return. Fully auditable.

Demand-Verified Products

Nothing gets made without proven demand. No overproduction. No wasted materials. Pure circular logic.
